Motivation

Learners solve math problems better with subgoals in mind.

Challenge

Online learners do not receive personalized guidance for subgoal learning because of its high development cost.

$$\begin{array}{rcl} 6x + 10 = 2x + 4 & & \\ -10 & -10 & \\ -2x & -2x & \\ 6x - 2x = 4 - 10 & & \\ 4x = -6 & & \\ /4 = /4 & & \\ x = -3/2 & & \end{array}$$

Isolate variable

Simplify terms

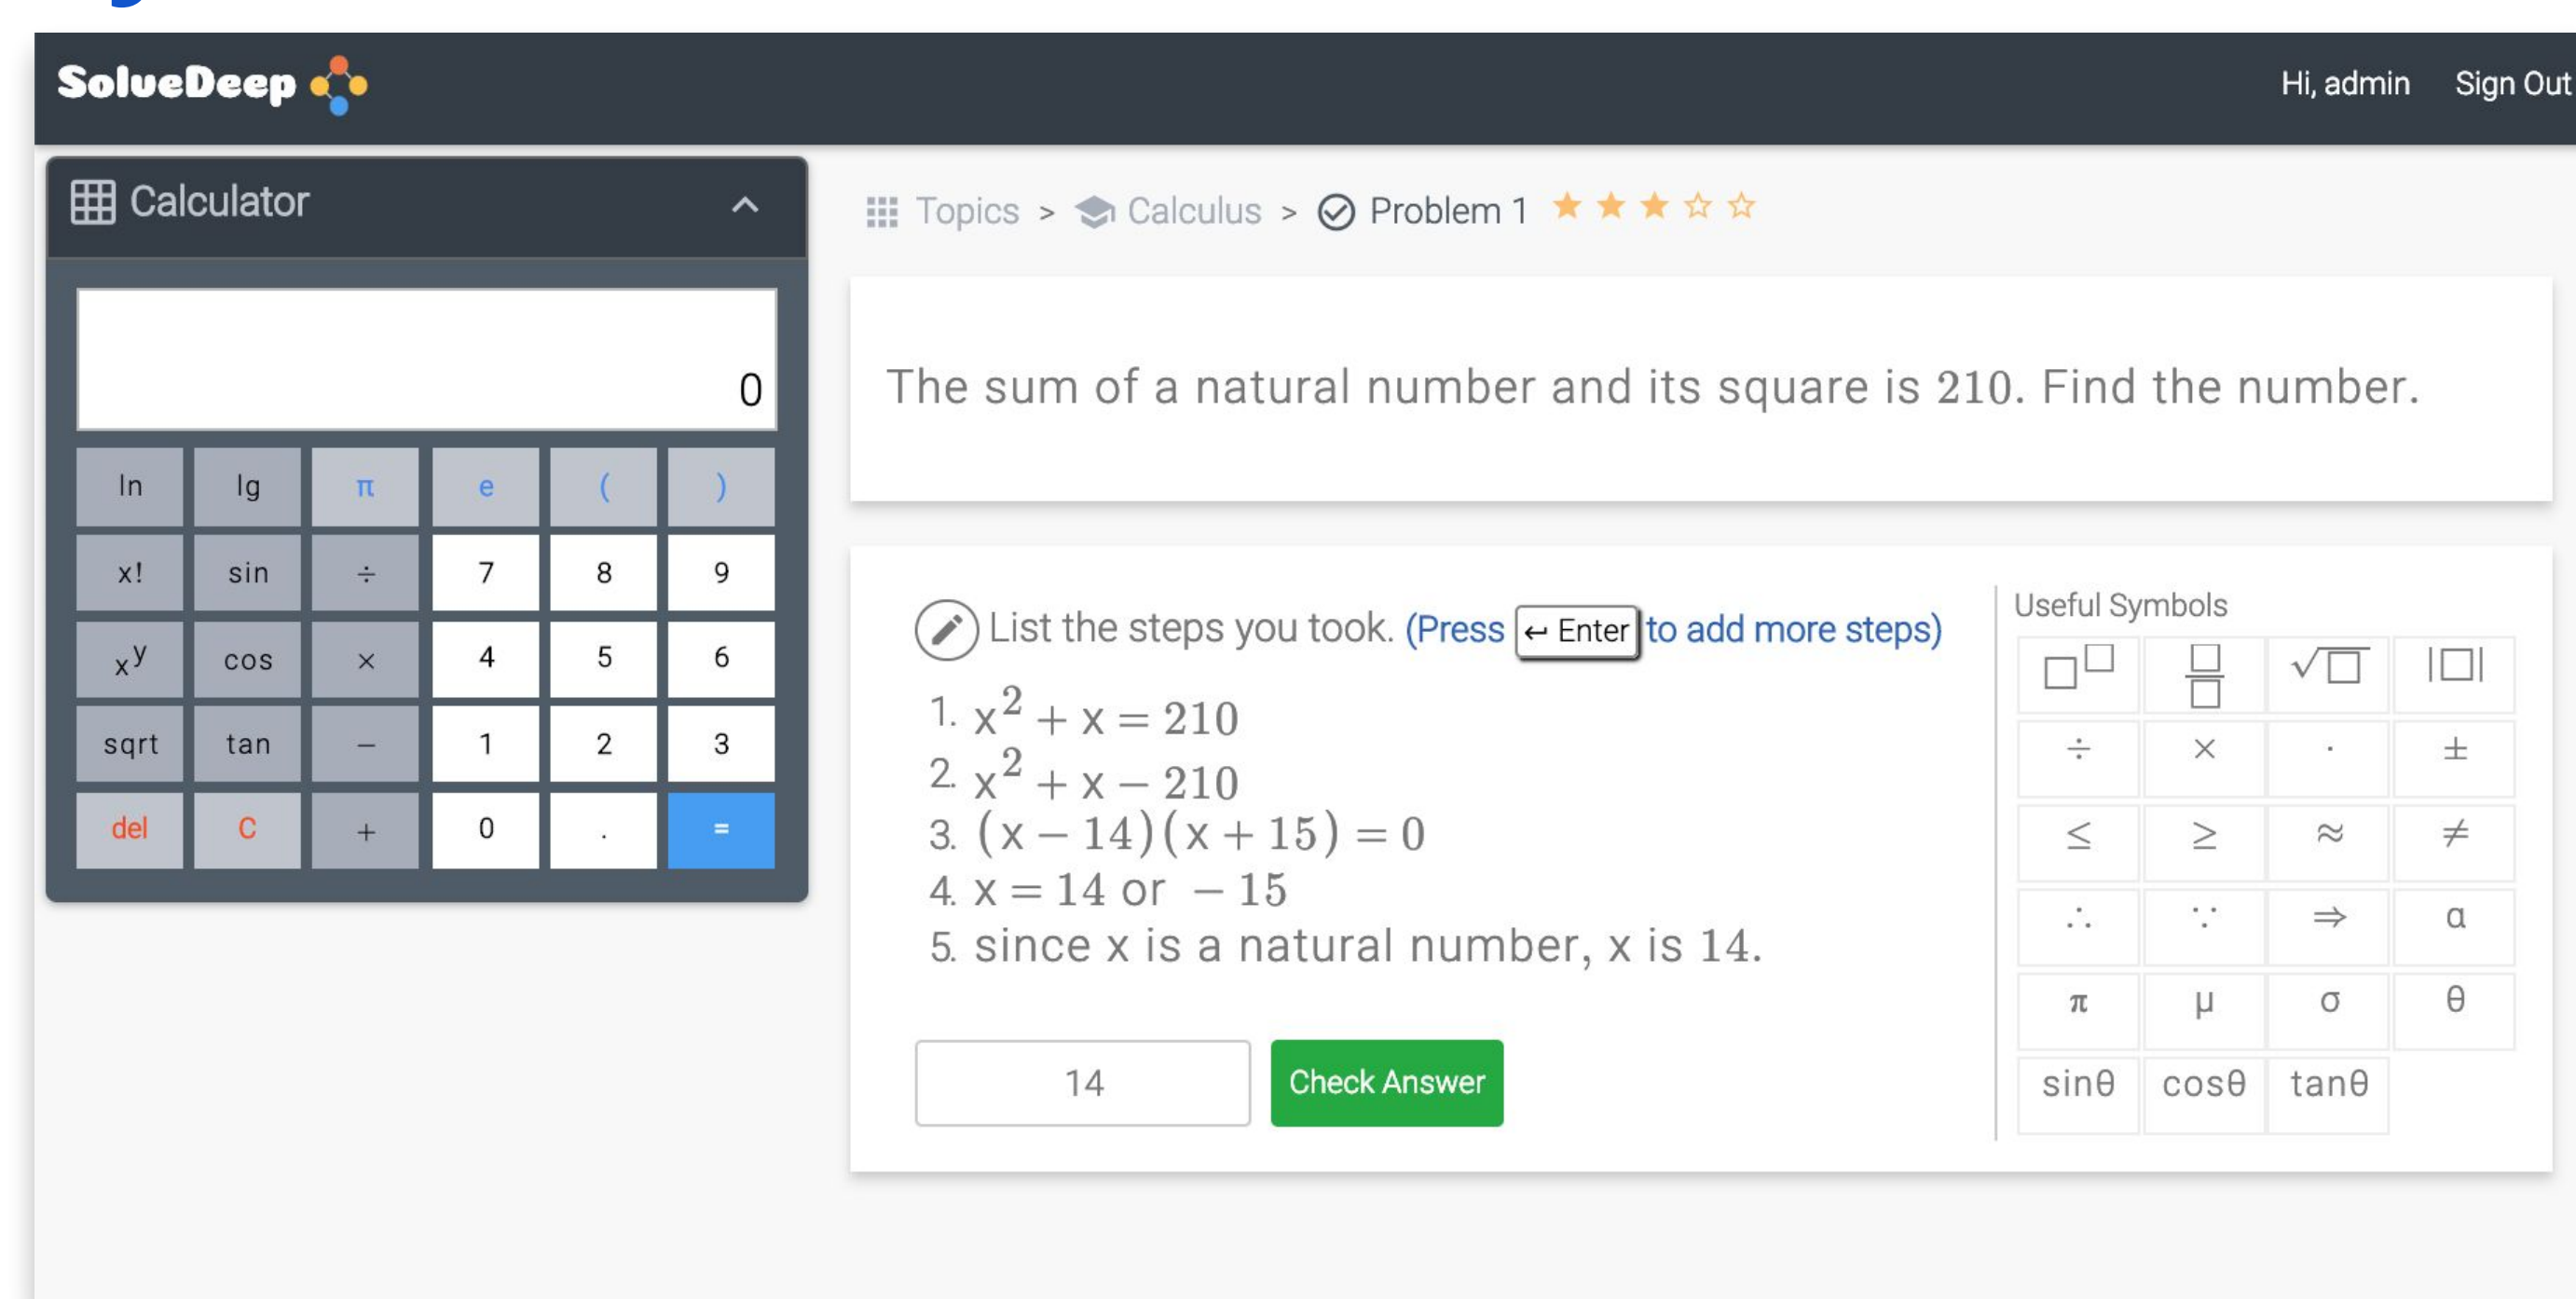

Individual steps make up subgoals, and subgoals make up the solution.

Solution: Learner-driven approach

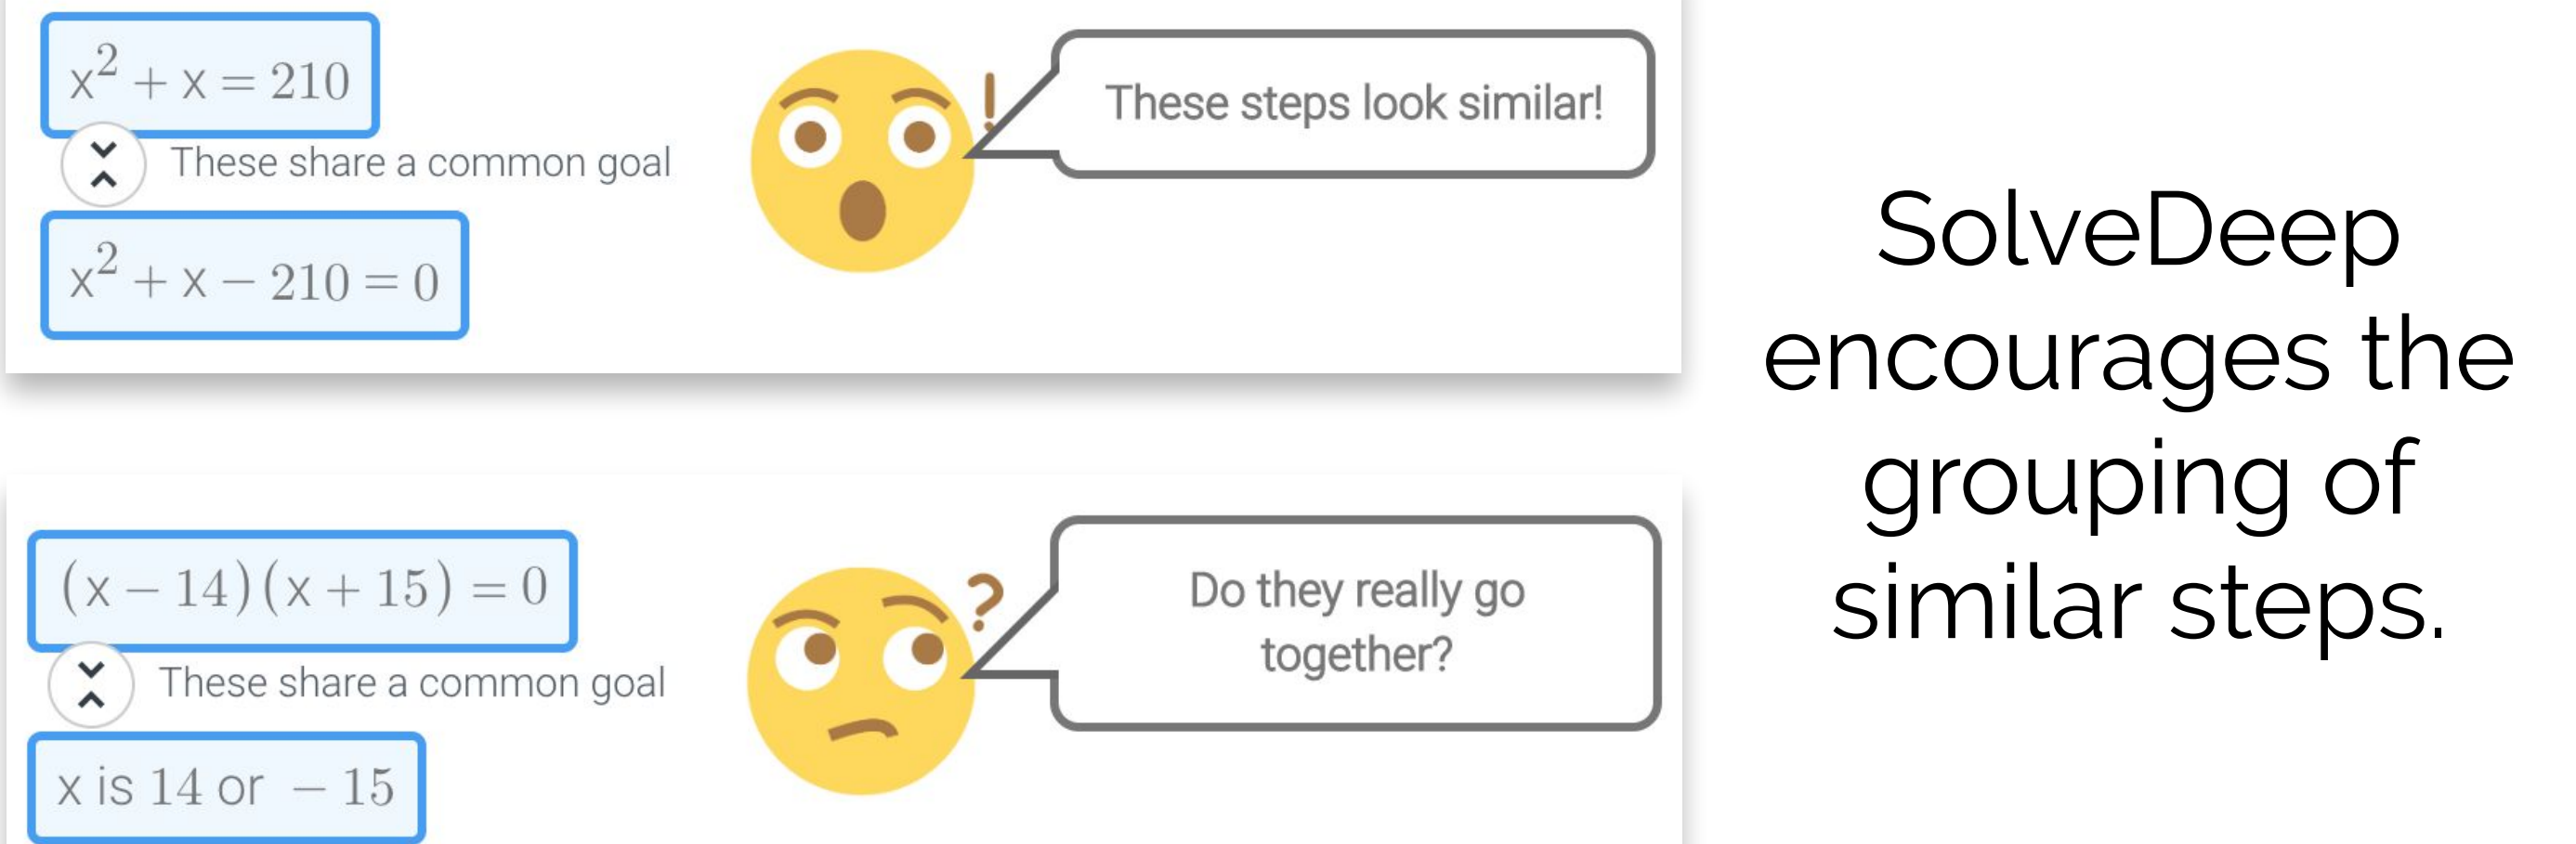

Collect complementary subgoals from learners and give personalized guidance to future learners.

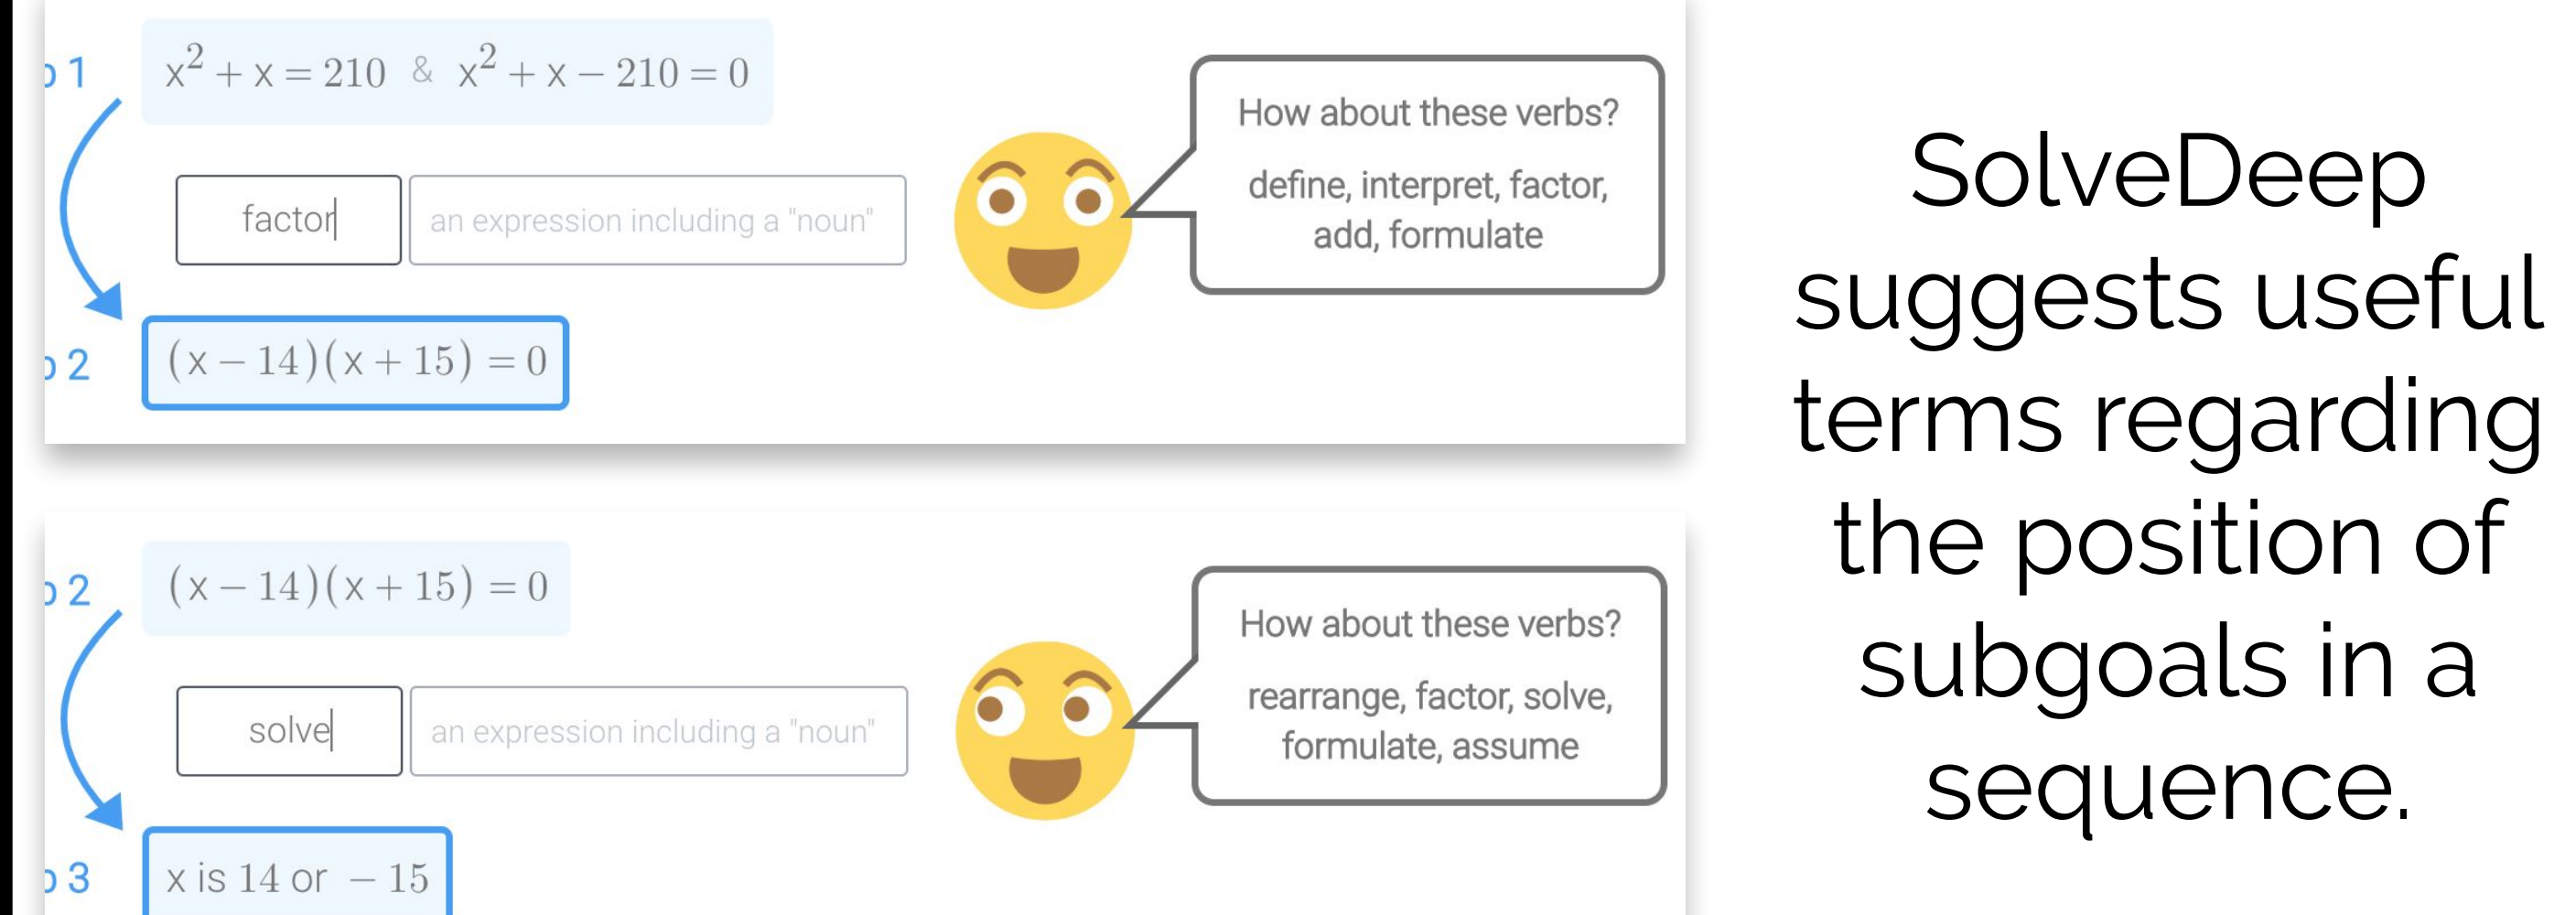

System

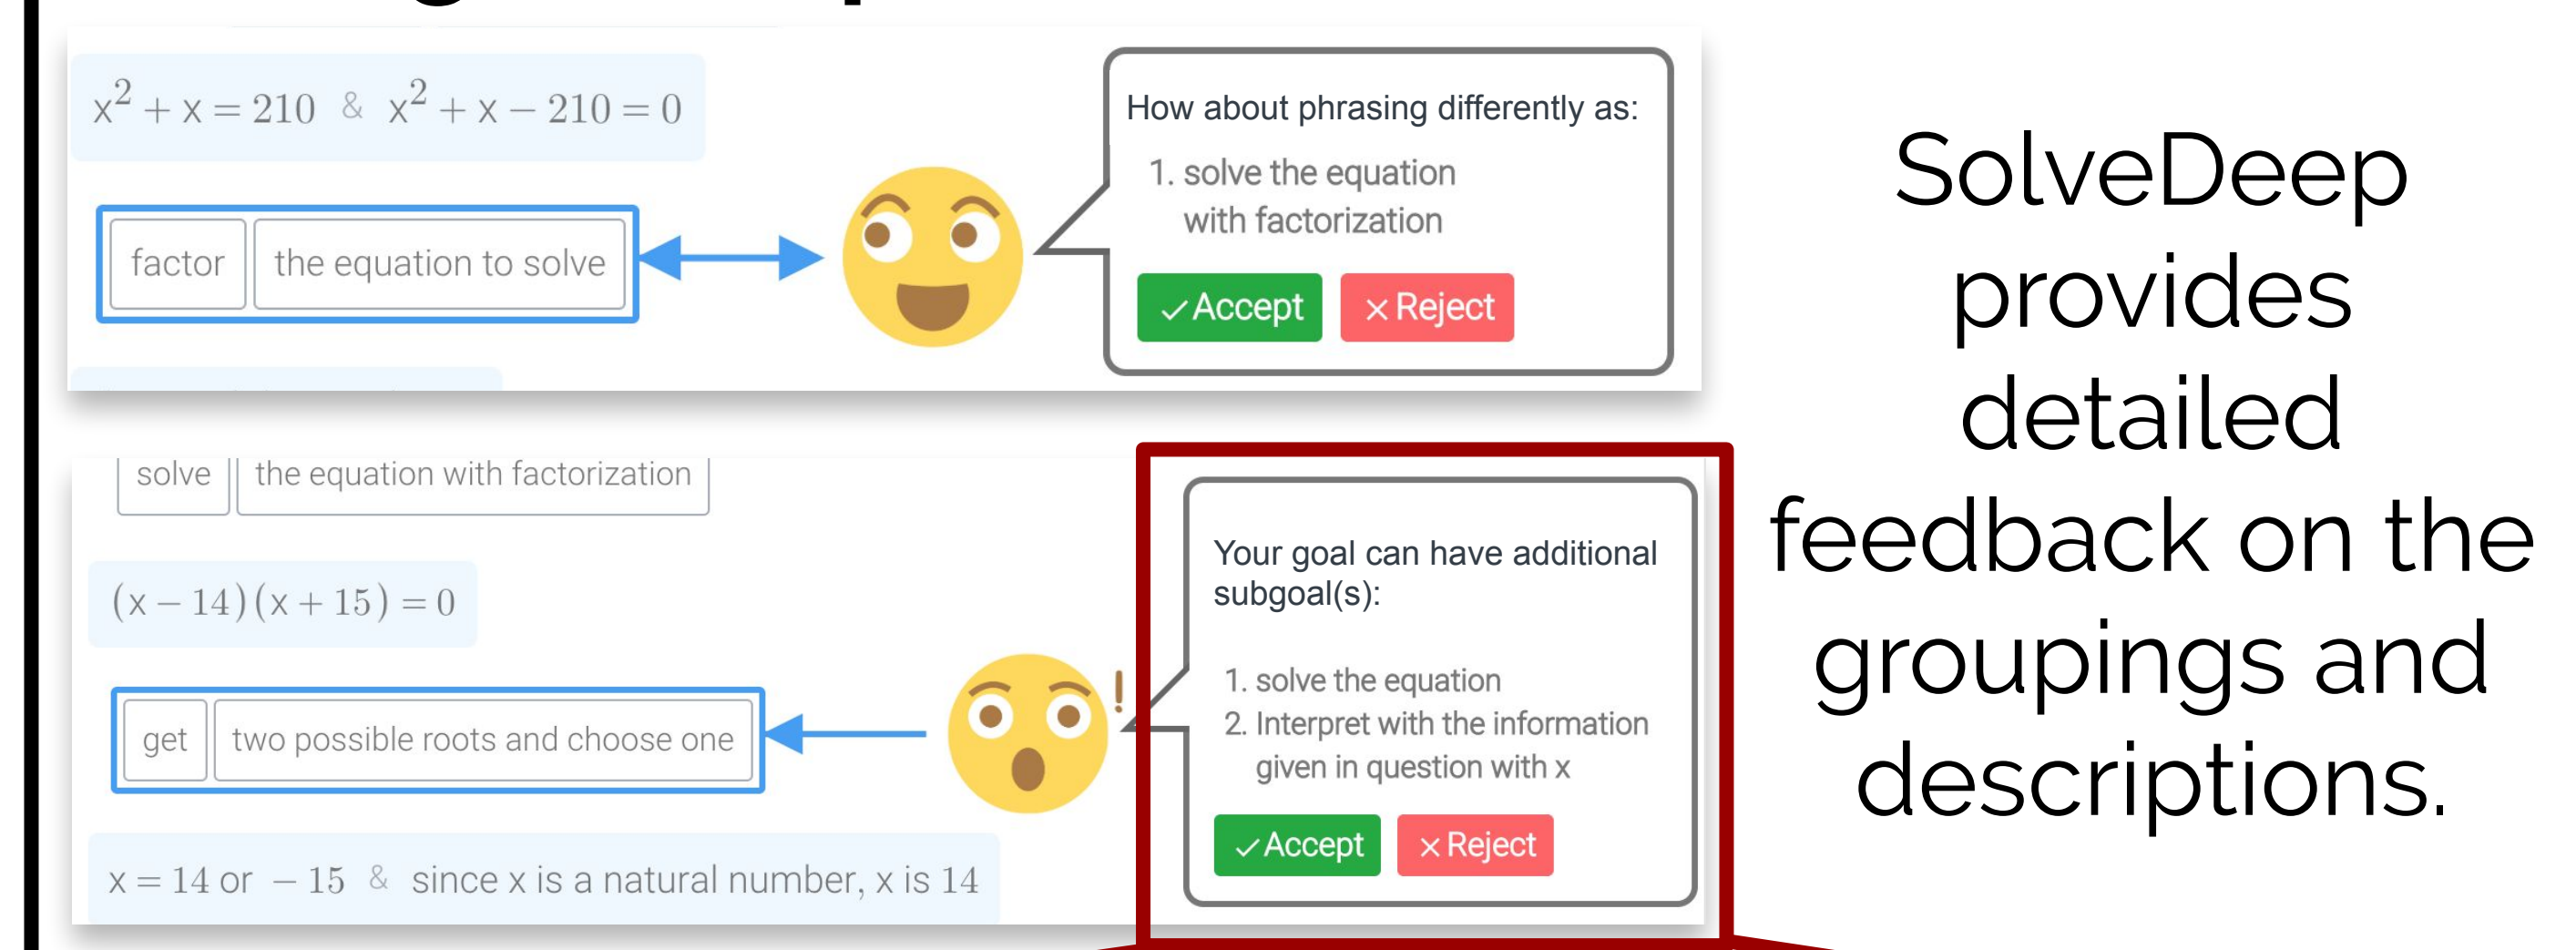

Stage 1. Group

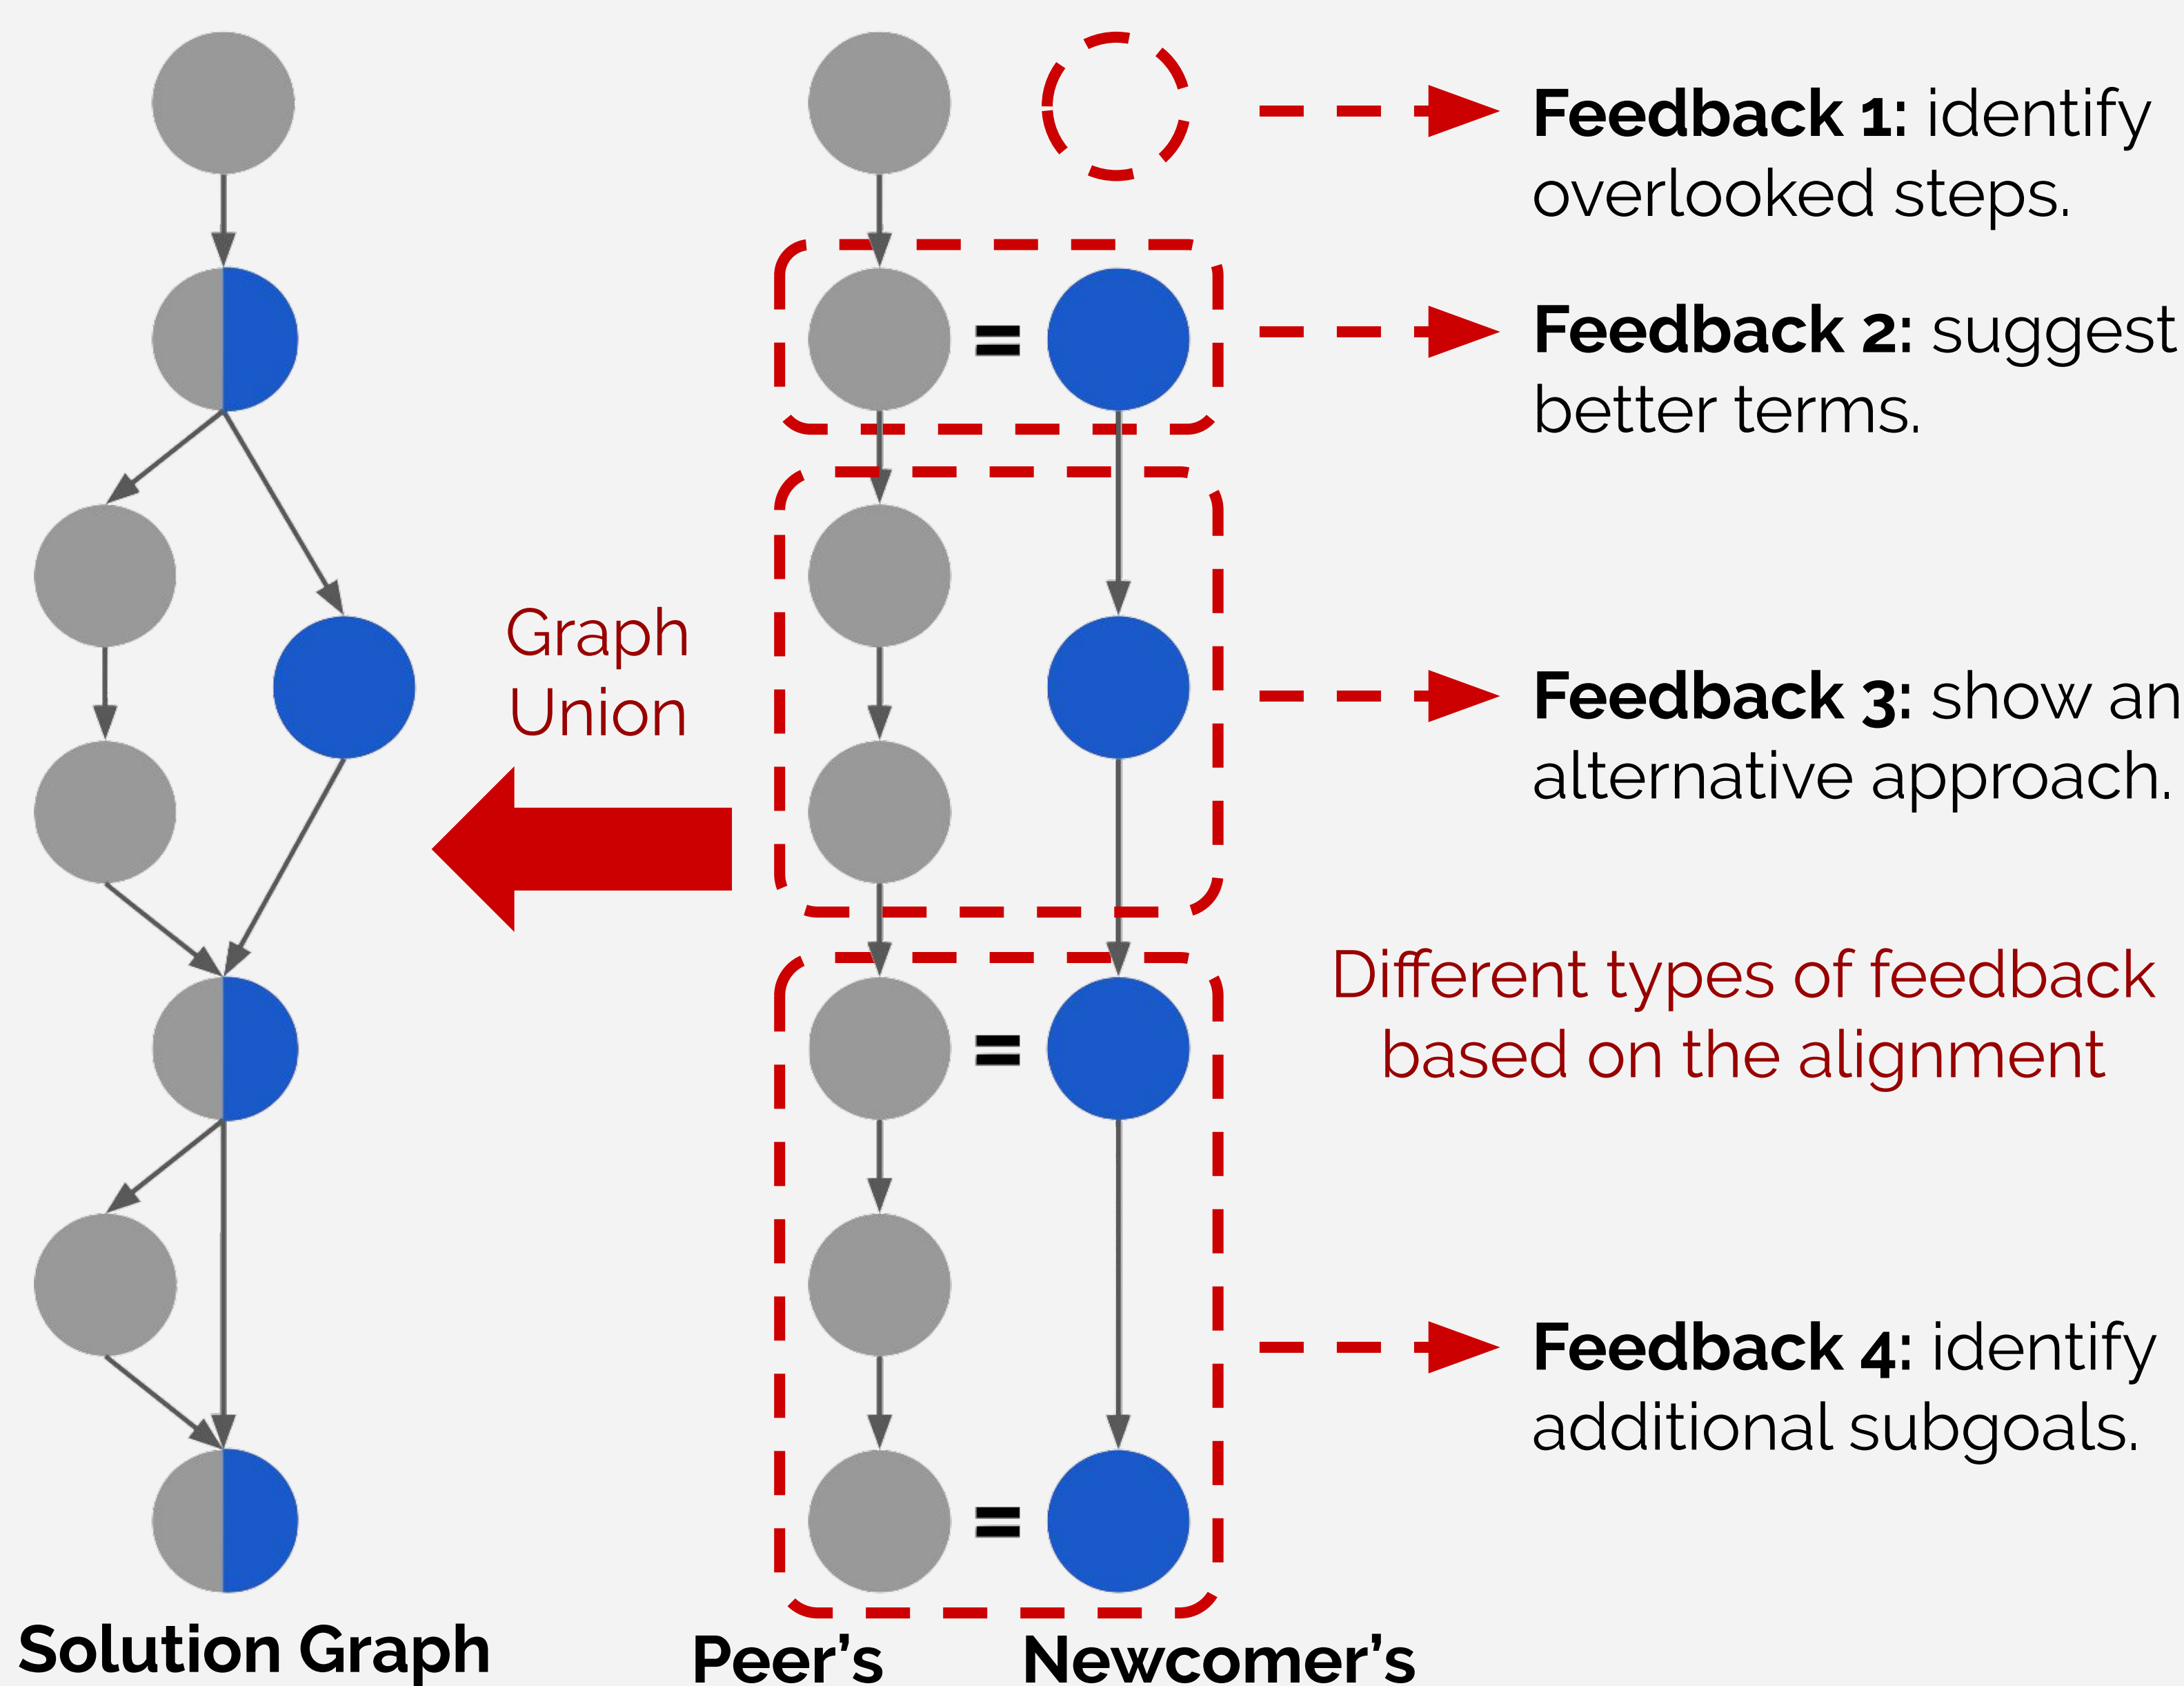

Stage 2. Describe

Stage 3. Improve

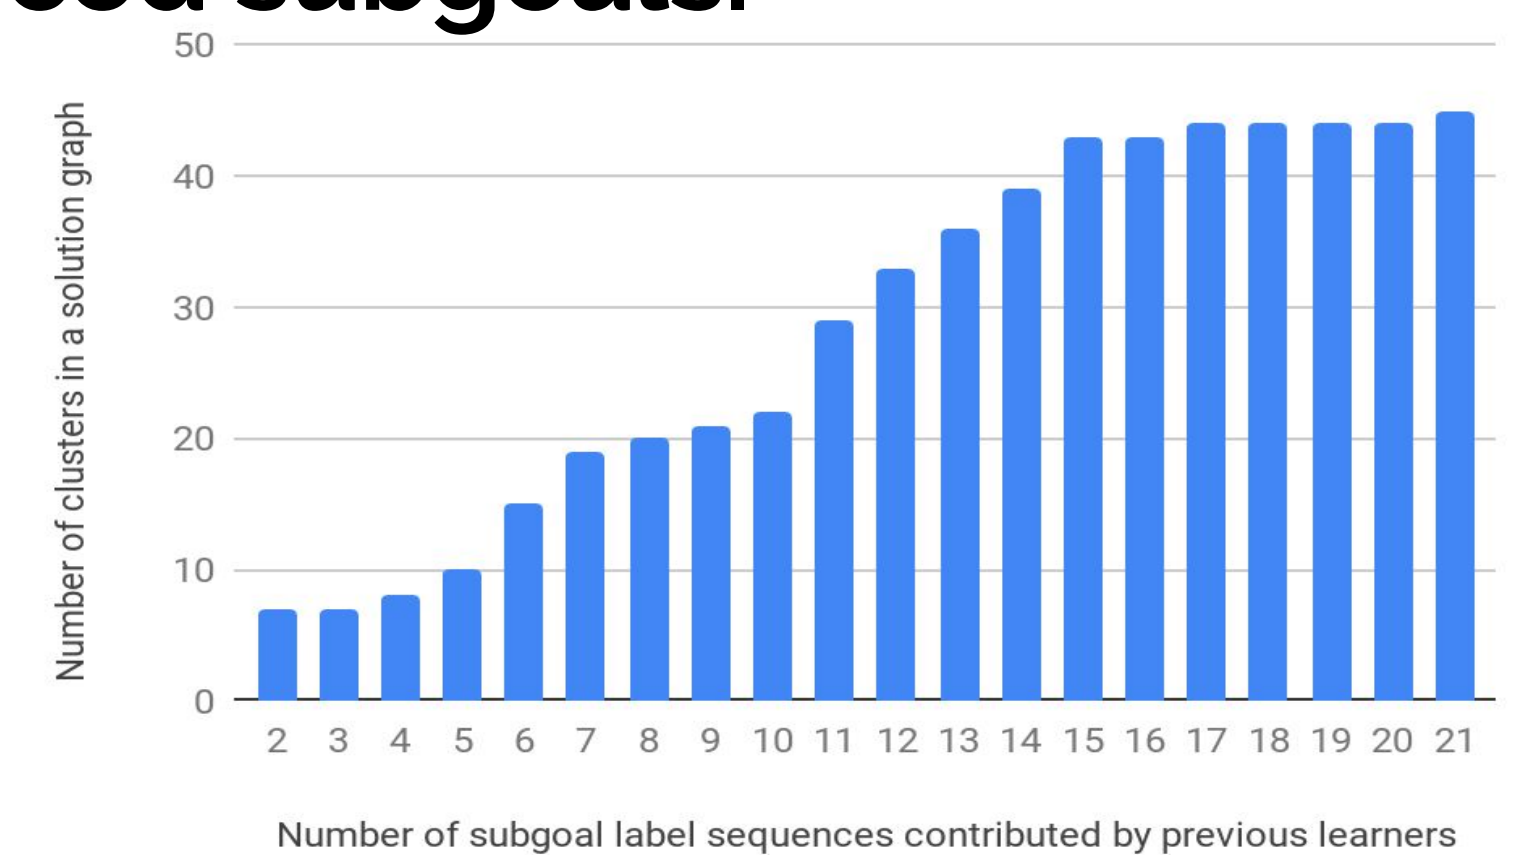

Pipeline: To generate feedback on subgoals

Evaluation: To see how SolveDeep matures with learnersourced data

1. Solution graph saturates after collecting enough learnersourced subgoals.

2. New strategies can be found from learnersourced solutions and subgoals.
